Using the earnings CSV as a base, prepare a new data file with employees' office locations. Make sure there are 5-6 distinct locations that are shared between

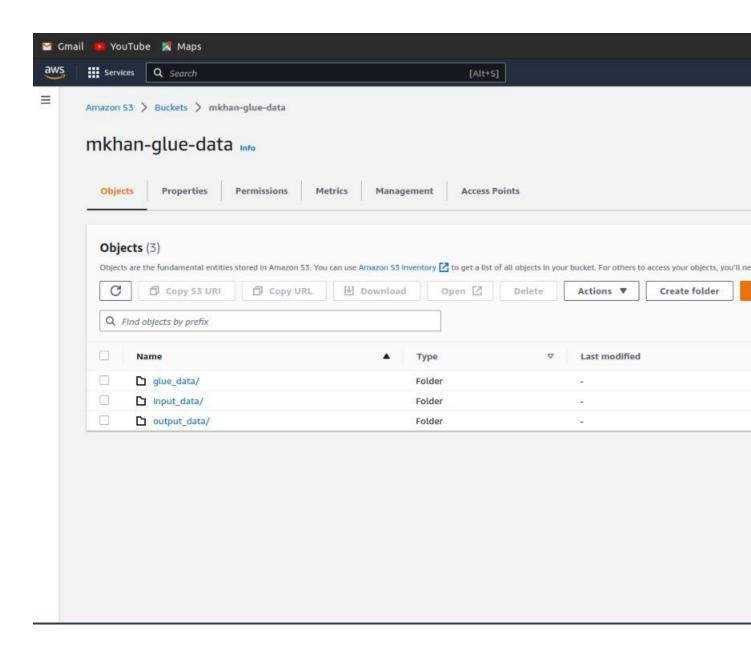

employees.

Create a Glue job that aggregates the data based on the office location to calculate average salaries and raise percentages for these locations.

**Created Bucket with Name khan –glue** 

Added three folders with all relevant data

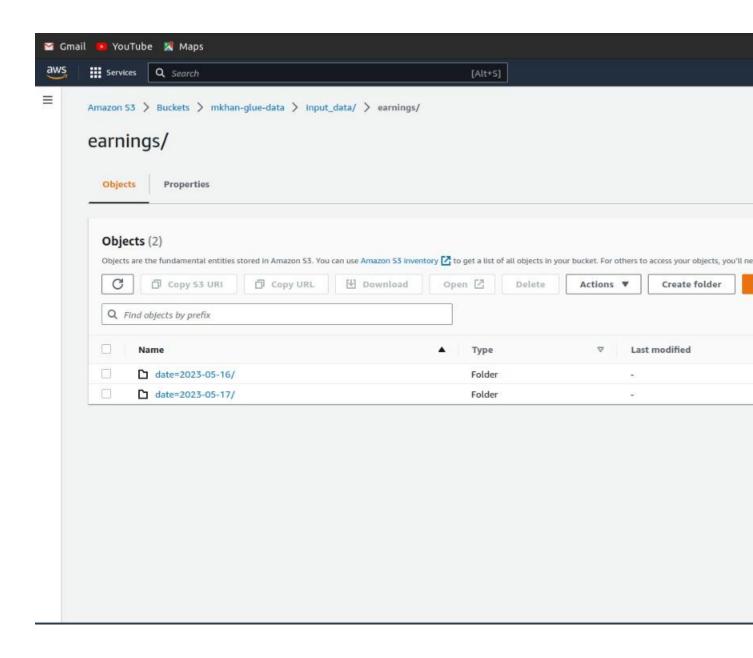

## **Inside input folder**

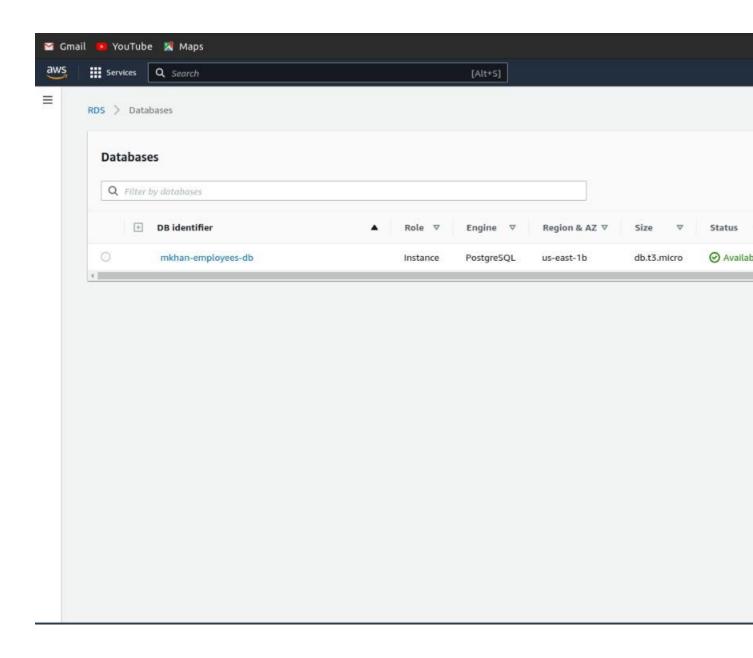

# Created two other folders namely

Date = 2023-06-16

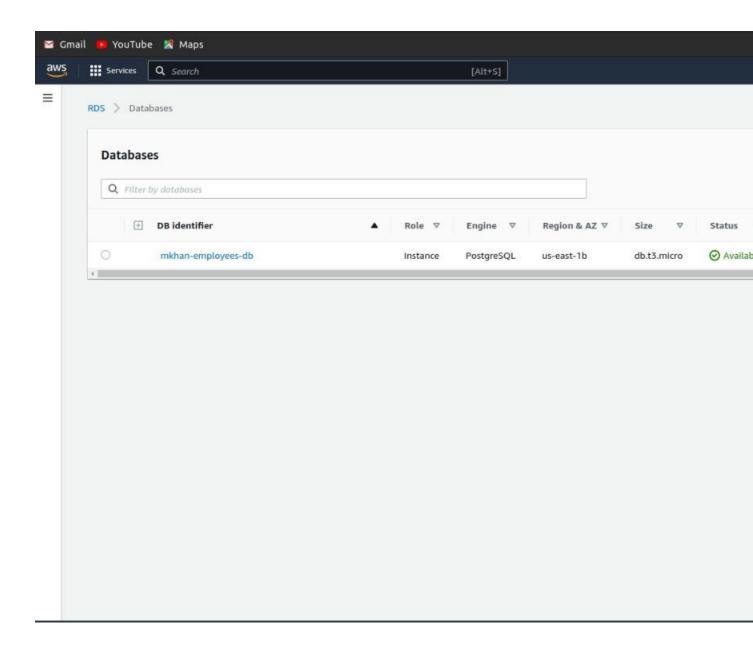

Date = 2023-06-17

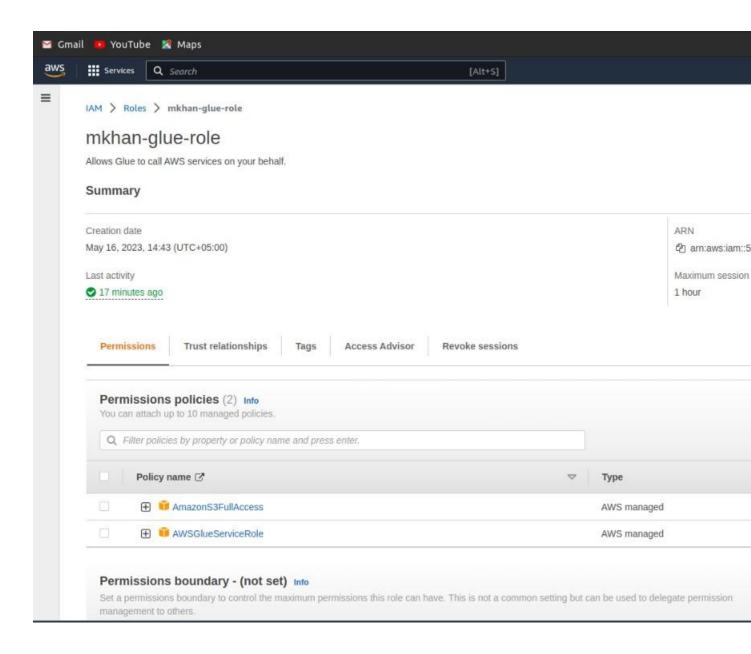

Created DBS database Named "mkhan-emlopyees-db"

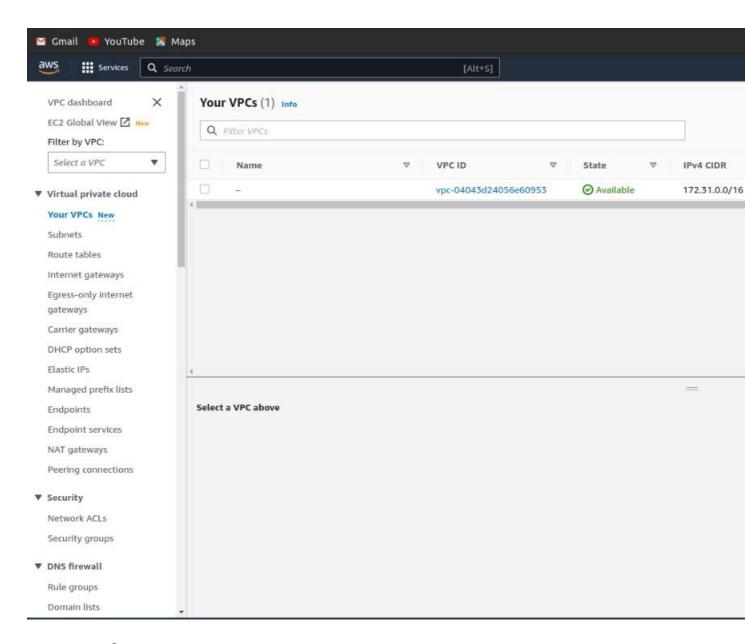

### **DB** details

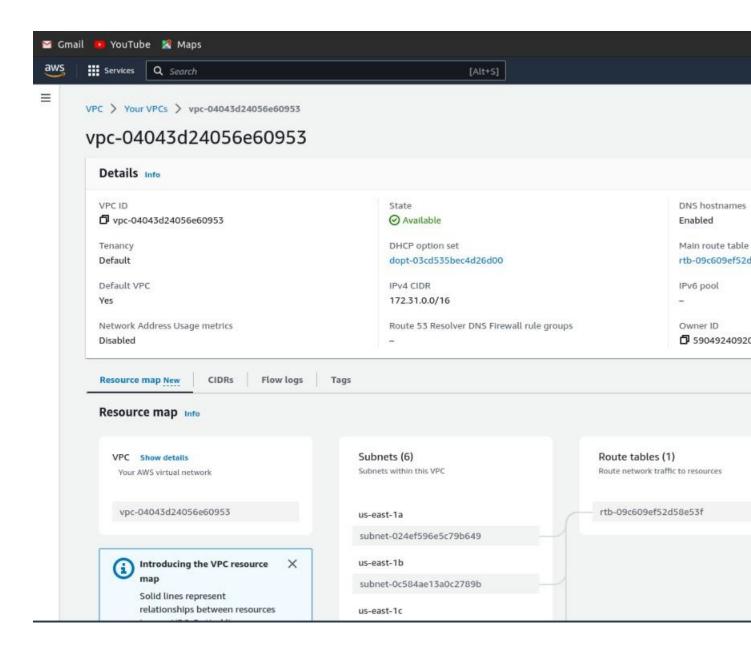

Created IAM role rules for S3 and glue access

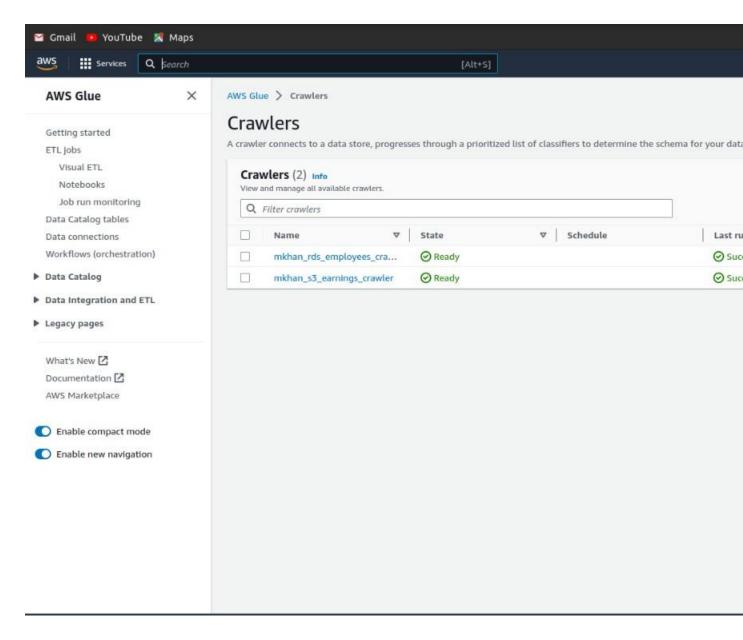

#### **VPC Created**

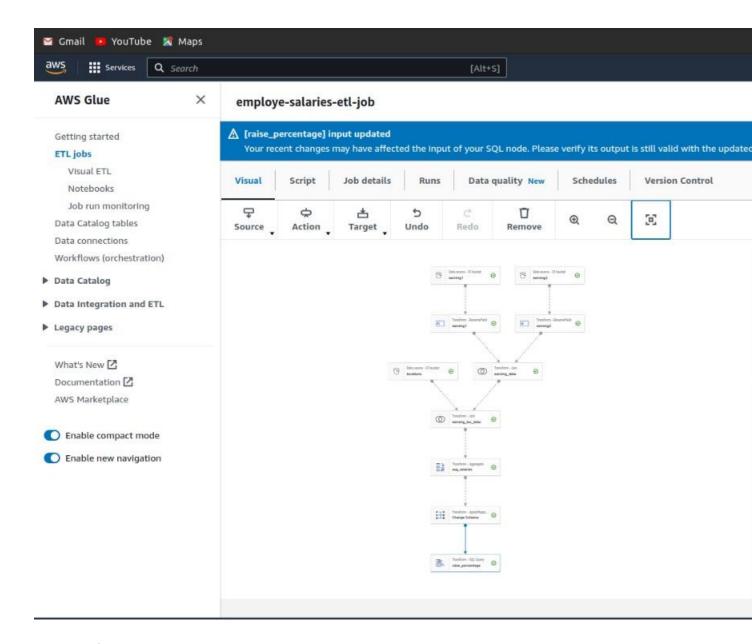

# **VPC Configuration**

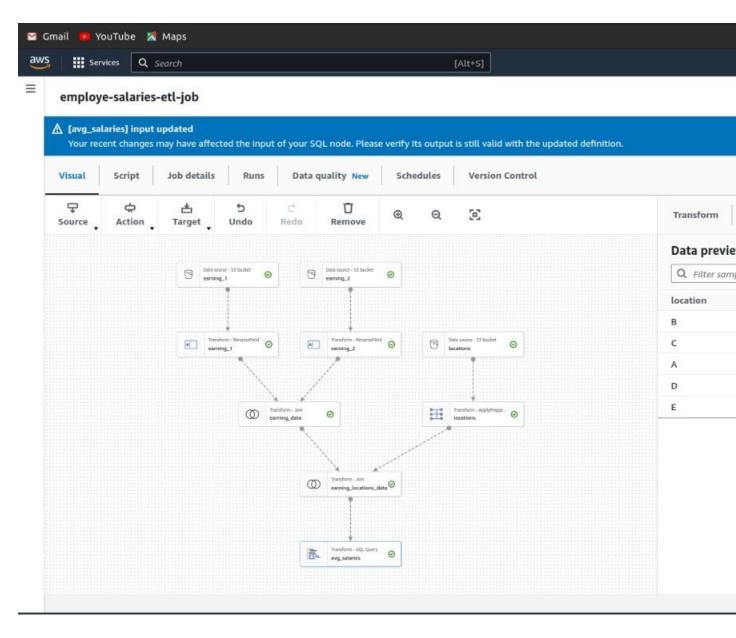

Created crawlers and they started running successfully

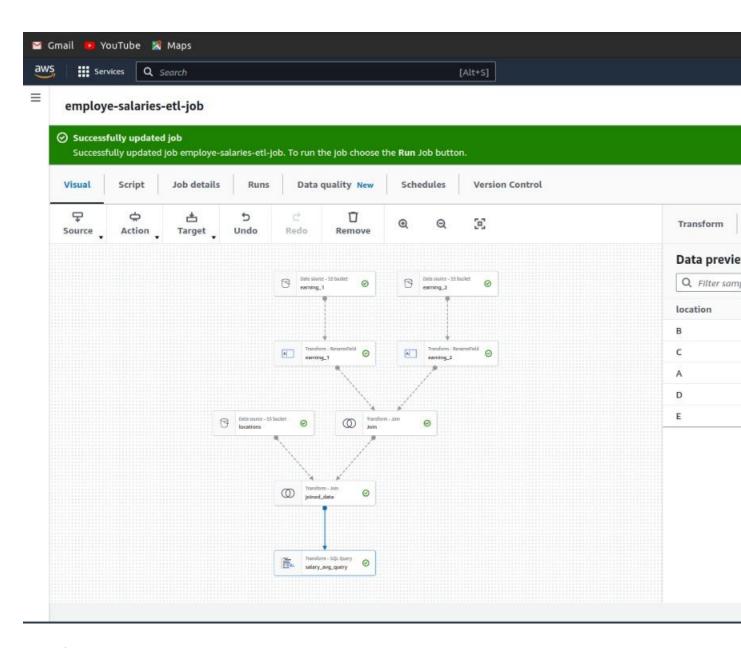

## Raise percentage

Avg salary

**Glue studio Running successfully** 

**Final Output**
